A SALUTE TO A CUSTOMER

TURNER SAND & GRAVEL, INC.

Family business has been regravelling county roads for more than 41 years

**LeRoy Turner,
 President**

**Rodney Turner,
 Vice President**

When Rodney Turner went to work for a construction company hauling gravel out of a pit near Wolverton, Minn., he was working in familiar surroundings. “I’ve been around gravel pits since I was seven years old,” he said.

That was in 1959, and Turner has been hauling gravel ever since. In 1965, he bought the gravel pit operation and named his company Turner Sand & Gravel. Today the company operates out of eight active pits in a four-county area around Wolverton — including the original gravel pit.

“Basically, we supply Class 5 gravel to about 50 townships for regravelling roads,” said Rodney. “We also supply crushed gravel to some contractors, but our base business is regravell for counties and townships.”

The business is a family affair today with Turner’s wife Margaret, son LeRoy and daughter LaDawn actively involved. LeRoy is President, Rodney is Vice President, Margaret

is Treasurer and LaDawn is Office Manager and Bookkeeper. LeRoy and LaDawn have both been working for their father since they were old enough to drive.

Sixteen other employees, including operators, truck drivers and office personnel, also work for the business that serves customers within about a 75-mile radius from Wolverton.

“We go all the way from Rothsay to Ulen,” noted LeRoy. “For the past five or six years we’ve usually stayed in just four counties — Wilkin and Clay counties in Minnesota and Richland and Cass counties in North Dakota.”

They frequently do street work in smaller towns like Hawley and Barnesville, he said, for several different contractors. Another typical job was when they supplied and hauled all the materials for a new hospital that was being built in Breckenridge.

Employees play a big role

Employees have played a big role in the growth and success of the business during the past 40 years, according to LaDawn. “We have great employees,” she affirmed. “We are fortunate to have these people working for us.”

Joe Charon is one of those longtime employees with 28 years experience as an operator for Turner Sand & Gravel. Dave Blilie, a truck driver, has been with the company for 29 years and Dawn Blilie works with truck scheduling. Other key employees include Philip Rogers, who works with the crushing plant, and the father-and-son team of Bob Getz and Mike Getz who are other longtime employees. Bob recently retired after 22 years with the company.

A Turner Sand & Gravel operator uses a Komatsu PC600LC-6 excavator equipped with a long-reach boom to dig up material at the Clay County pit.

Using the company's new Komatsu WA500 wheel loader, a Turner Sand and Gravel operator carries materials at a recent job near Ehrhard.

Turner Sand & Gravel relies on this portable Cedarapids cone crusher to crush nearly 200,000 tons of material each year, mainly Class 5 material it uses in its road regraveling operations.

"We've developed a good reputation for our service and for doing good spreading jobs," commented Rodney. "We have many experienced people who know what they're doing and that makes a big difference."

Longtime General customer

According to Rodney, another reason for the company's ongoing success is the equipment they use. Most of it has come from General Equipment & Supplies in Fargo. "I started with a crawler tractor with a one-yard bucket and five trucks," he said. "We went to tandems in 1970, started pulling pup trailers in '74 and then bought belly dumps. So we were able to increase the quantity of material hauled, not the number of trucks."

In 1987, the Turners made the decision to buy a cone crusher and purchased a Komatsu WA500 loader to keep up with the crusher. LeRoy designed the feeder hopper used to feed the crusher. "We bought the first new WA500 that General Equipment sold," recalled LeRoy. "In fact, it's still running. LaDawn calls it her loader because she uses it for loading trucks."

According to LeRoy, they have purchased more than 20 machines from General Equipment during the past 40 years, including five Cedarapids crushers, three stackers, six loaders, two excavators and three dozers. The Turners work with General Equipment Sales Representative John Gromatka.

"A big reason we go with Komatsu is the low-interest financing program and quality of service," explained LeRoy. "We're happy with them, so we keep buying them. We've tested other loaders but we've been very happy with our Komatsus."

After the Turners bought their first WA500, they bought a WA420 for loading trucks. Last year, they purchased a WA500-5 and, more recently, a WA450-5 and a PC600 excavator, which the company uses at its home pit, Clay County pit.

"The excavator is an easier machine physically to run than the crane," noted LeRoy. "With the dragline we could get 100 yards an hour. With the PC600, we can do 200 yards an hour. The automatic greasing cuts down on the time as well."

Some custom crushing

Most of the crushing at the company's pits is for Turner's own use — about 200,000 yards a year — but they also do some custom crushing for customers. The portable crusher, a Cedarapids cone crusher with 20-foot deck screen, was at a job recently in Ehrhard for a contractor who needed 50,000 yards of Class 5 gravel.

"Jobs like that are a small part of our business," reported LeRoy. "We also make a fine-sand product and have made hot-mix material for paving companies in the past. But our main business is producing road gravel. Last year, we put down gravel on more than 200 miles of county roads in Clay County alone."

Looking ahead, LaDawn says the family gets together on a regular basis to talk about the future. "We'll just see what fits with the family and our employees," she said. "It's all about trying to balance things, which is very hard when you're a seasonal business. We don't want to grow beyond ourselves, but we know that to stay competitive, we have to grow. So we're looking at controlled growth." ■

A SALUTE TO A CUSTOMER

BASARABA'S EXCAVATING & DIRT WORKS, LLC

"Hands-on" contractor built business on quality work

No one knows the meaning of "hands-on owner" as well as Brent Basaraba. Co-owner of Basaraba's Excavating & Dirt Works in Wilton, N.D., Basaraba finds himself working in all phases of the business.

"I estimate, I bid jobs, I go look at the jobs, I run the jobs, I run the equipment, I drive the truck, I get parts and solve all the problems," said Basaraba, who started the business seven years ago with his wife Julie, who is also Co-owner.

He has plenty of help, however, in the form of his sons, Josh and Andy, who are both equipment operators, and Julie, who handles all the bookkeeping and paperwork in the office. He also relies on 12 other seasonal workers to tackle the company's projects, which consist mostly of underground utility jobs for municipalities and private contractors within about a 50-mile radius of Bismarck.

From septic systems to pipes

In the beginning, however, Basaraba and his sons were putting in septic systems and basements and graveling roads, as well as doing underground work. After deciding they were spreading themselves too thin, they decided to specialize in underground work and they've been busy ever since.

Basaraba developed a reputation for keeping busy during his many years of working for other contractors before going on his own. He has become known for the quality of work his young company produces.

"Word of mouth has helped," he noted. "We are often invited to bid on private work because of our reputation."

Good people

The quality of their work starts with the people who work for the company, according to Basaraba. The work force includes several people who have been with them for three to five years. Albert Castillo, Jay VanWatermulen and Dave Shelstad are operators who have been with him from the start.

"When I find good people, I try to do whatever it takes to keep them," commented Basaraba. "My experienced people are worth their weight in gold. It means peace of mind for me. I don't have to be there and supervise them."

Good people both inside and outside the company have played the biggest part

Brent Basaraba,
Co-owner

Continued . . .

A Basaraba's operator prepares to load trucks with the company's Komatsu PC300LC-6 excavator at a jobsite near Bismarck. Based in Wilton, Basaraba's Excavating and Dirt Works does mostly underground utility jobs for municipalities and private contractors.

Basaraba looks toward increasing project size

... continued

Andy Basaraba,
Operator

in making the company successful, he acknowledged. "We've had great support from our banker, our insurance company, our bonding company, the equipment dealers and suppliers as well as from our employees," he said. "It's really the people who support us, not the machines we have or the pipe we lay."

Brent Basaraba (left), Co-owner of Basaraba's Excavating and Dirt Works, talks with General Equipment Sales Representative Justin Stewart. "We need somebody who will work with us, someone we can build a relationship with, and we've found that with Justin and General," said Basaraba.

Specializing in underground work means Basaraba's Excavating and Dirt Works hauls a lot of pipe. To make the task easier, the company purchased this Trail King TK24 from General's Bismarck branch.

Equipment from General

One of the company's major equipment suppliers is General Equipment & Supplies. Basaraba's Excavating's fleet includes a Komatsu PC300LC-6 excavator and a WA420 wheel loader from General, as well as a recently purchased Trail King trailer.

When looking for equipment, Basaraba says he looks for fuel efficiency, durability, parts availability and service. "But support from the dealer is most important. We need somebody who will work with us, someone we can build a relationship with, and we've found that with Sales Representative Justin Stewart and General."

Basaraba said he was really looking for a PC400, but rented the PC300 last summer and was very pleased with it — so he bought it. "Then I bought the loader because of General's support," he said. "I don't feel like I'm just a number with them. I think they really want me to succeed. They realize that if I succeed, they succeed, so they've done a good job for us."

Basaraba's Excavating uses the excavator mainly for digging trenches, while the WA420 does backfilling. The loader features forks, a bucket and a packer wheel. "It's a very versatile machine," confirmed Basaraba.

Looking ahead

Looking ahead, Basaraba hopes to see the family's next generation running the business in about six years, so he and Julie can take advantage of semi-retirement to do some traveling.

"I would like to get to the point where I'm bidding and estimating, and if I want to go run a piece of equipment or help out running a job, I can do that, but not all the time," he stated.

He doesn't plan to increase the number of employees working for Basaraba's, but to increase the amount of work they do with larger equipment. "I'd like to get a couple of PC400s," he commented. "My long-term goal is to get to the point where we can do more work with the same number of people, just get bigger equipment." ■

WE'VE TRASHED THE STANDARD FOR BIG PUMP PERFORMANCE.

Sizes up to 30".
Heads to 470'.
Flows to 40,000 GPM.

There's no comparison. Gorman-Rupp delivers the biggest, broadest pump line in the business. On construction and sewage bypass jobs with tricky intermittent flow, a Gorman-Rupp pump easily handles solids up to 6" in diameter. Get your hands on a Gorman-Rupp, the world's undisputed standard in prime-assist performance.

“AMERICANS FOR PURE WATER”

NUCA leads effort to secure more water/wastewater infrastructure funding

Eben Wyman

This Guest Opinion was written by Eben Wyman, Vice President of Government Relations for the National Utility Contractors Association (NUCA). It's excerpted from a column that appeared in the May 2006 issue of Utility Contractor magazine and is printed here with permission.

As the Bush Administration continues to give very low priority to funding programs that address the problem of America's deteriorating water and wastewater infrastructure, NUCA (National Utility Contractors Association) is embarking on a new effort to get American citizens engaged in the debate. With existing needs approaching \$200 billion, there is no better time to mobilize the general public to put pressure on the federal government to fix the nation's water and sewer systems. That is exactly what the "Americans for Pure Water" campaign will do.

The campaign is the brainchild of the Clean Water Council (CWC), a coalition of some 30 national organizations representing underground construction contractors, design professionals, manufacturers, suppliers and finance professionals committed to ensuring that America has sound, dependable water/wastewater infrastructure.

Members of CWC, which NUCA chairs, have worked tirelessly to keep this issue on the front burner on Capitol Hill. But given current White

House opposition and Congressional apathy (federal infrastructure funding has been cut for two straight years and is on the chopping block again this year), it has become clear that now is the time to reach outside of the nation's capitol and into local communities.

How you can help

There are short- and long-term solutions to the problem of the country's deteriorating infrastructure. One is the establishment of a water infrastructure trust fund as a dedicated source of revenue for water and sewer projects. Another is to reauthorize the current State Revolving Fund (SRF) programs at substantially higher funding levels.

Rather than replace those efforts, the "Americans for Pure Water" campaign is designed to complement them. We want to create in the minds of the man, woman and child on the street a *direct* connection between America's failing underground infrastructure and growing problems with public health, the environment and America's overall quality of life. The goal is to get them mad and involved.

Lawmakers listen when constituents demand action. Therefore, as the campaign progresses, organizers will need people to show up and participate in public relations activities and events designed to generate local media attention.

Water is the resource we rely on most. It is needed to sustain not only life, but also the quality of life. Anyone who wants to help create a citizen backlash to the continuing water/wastewater infrastructure cuts is strongly encouraged to join the campaign. And, the time to do it is now. To become involved, please contact NUCA's Government Relations Department at (703) 358-9300. ■

"Americans for Pure Water" is a promotional effort designed to generate grass-roots support to improve the nation's water/wastewater infrastructure. The campaign will try to involve the general public, as well as industry professionals, to pressure lawmakers to increase federal funding for water, sewer and storm drain projects.

WHEEL LOADERS

100% responsive
(HST puts the power at your fingertips)

KOMATSU[®]

Here are three excellent examples of wheel loaders engineered to work in harmony with the operator. The WA200-5, WA250-5, and WA320-5 feature Komatsu's electronically controlled Hydrostatic Transmission (HST) for smooth, precise power when digging, loading or moving material on your site.

- HST delivers high efficiency and maximum power.
- Fully automatic shifting lets the operator focus on the task at hand with the right balance of hydraulic response and travel speed.
- Traction control system reduces tire slippage.

If you're looking for high productivity, low fuel consumption, easy maintenance, and superior operator comfort, you're looking for machines that are...

100% Komatsu.

866.513.5778 www.komatsuamerica.com

LOWER YOUR OPERATING COSTS

Consider these options when seeking ways to reduce fuel costs

Contractors know today's marketplace is more competitive than ever and any edge can make a big difference. With record-high fuel prices, one chief concern now is how to bid a project, knowing that the job may not start for months. Do you bid at current prices and hope they stay stable, or do you plan for price increases?

Either way, there are methods to combat the rising costs of running your equipment. Some may be things you're already doing, some may be things that are easy to implement and some may be suggestions you had never thought of before. They apply to all types of machines, from a dozer moving massive amounts of material in mining operations, to a compact excavator digging water services for houses, to anything in between.

"There are many ways to save fuel," said Les Scott, Manager of Komatsu's Working Gear Group. "Implementing any one of them will show results. It's a matter of what works best for the individual user."

Updating your fleet with newer machinery can increase fuel efficiency. For example, Komatsu's PC200LC-8 features an ecot3, Tier 3 engine that provides more power and better fuel economy than its predecessors.

One of the easiest ways to save fuel may be the most simple: don't idle the machine during non-production times. At these times, turn the machine off. Based on just one hour of idle time per day, you could save more than five gallons of fuel per month.

Reducing travel speed is another quick and easy step to lowering fuel consumption. While it may seem logical to move around a jobsite as quickly as possible, the added speed does consume more fuel. By slowing down 10 percent you can improve fuel efficiency by 8 percent.

Regular maintenance is essential

Regular maintenance is vital to the longevity and performance of equipment. Following recommended guidelines for routine service, such as changing filters, keeps machines running smoothly and helps reduce serious problems. A well-maintained machine doesn't work as hard, thereby reducing the amount of fuel needed to get the job done.

You may want to consider using a preventive maintenance plan or a PM contract, through your distributor. The plans offer comprehensive services, including changing all oil, filters and fluids at regular intervals. During a routine service, trained technicians thoroughly inspect machines for both visible and hidden problems that may potentially lead to a serious loss of time. Addressing these issues in advance reduces emergency downtime and keeps equipment in top working condition, which makes it more efficient and productive.

"Regular maintenance is extremely important, and it's one of the easiest things an equipment owner or operator can do," said Komatsu Senior Product Manager Tom Brakeall. "Any step you can take to eliminate

Eliminating idling and reducing travel speeds are two quick and easy ways to save fuel. During times of non-production, consider turning the machine off. Reducing travel speeds by 10 percent can improve fuel efficiency by 8 percent.

significant downtime is worth it. A PM contract will ensure your machinery is serviced on time and properly, so you can concentrate on getting more work done without worrying whether a machine is going to break down. Most distributors do the PM after hours, when the machine is down anyway, so there's no downtime involved with the service work."

Eliminate inefficiencies

Eliminating and reducing unnecessary and/or inefficient movement go hand in hand with travel speed. Plan ahead to avoid moving the machine around the jobsite in haphazard fashion, such as moving from one area to another then back to the original location. Instead, look for ways to keep the machine in the same area as long as possible and move across the site a little at a time.

You can further eliminate inefficient and unnecessary movement while the machine is performing. For example, in truck loading, reducing swing angle from 90 to 30 degrees will improve fuel efficiency by 3 percent. Speeding up production by shortening cycle times through improved excavation techniques can provide as much as 8 percent better fuel efficiency.

In quarry applications, a scale on the loading machine is an advantage because it helps eliminate unnecessary loading and dumping.

"A scale on the machine tells the operator exactly what he's putting in the truck. That eliminates a trip to the scale house where the truck driver may find out there's too much or not enough on the truck," said Scott. "If that's the case, the driver has to return to the quarry and adjust the load accordingly. A scale on the machine takes the guesswork out of the

There are several avenues equipment users can take to lessen their fuel consumption and increase productivity. Komatsu's new WA600-6 wheel loader is powered by a more fuel-efficient engine that also has more power than previous models. For even more efficient loading in quarry applications, consider equipping the machine with a scale to more accurately load trucks.

Regular maintenance following recommended guidelines saves fuel and improves equipment performance and longevity. Consider a preventive maintenance contract through your distributor to ensure all services are done properly and to identify and correct hidden issues that may lead to potential problems later.

equation, so trucks can be loaded faster and more accurately."

Along with shorter cycle times, you should maintain smooth digging, which can save more than 18 gallons of fuel per month. An operator can dig smoothly by not constantly pulling the control lever to try to lift a load that's too heavy. That action relieves oil pressure, which in turn increases the amount of fuel needed to perform the task.

While it may be important to get the task at hand done as quickly as possible, you could consider lowering engine speed. Ten percent less speed will reduce fuel consumption by 12 percent. Although you do lose about 7 percent in productivity, there is still a net gain in fuel efficiency, making the move cost effective in the long run.

Many equipment users also truck their own materials, which only adds to the fuel bill. But, there are ways to reduce those trucking costs as well. As with heavy equipment, a well-tuned truck engine is vital. Other factors, such as maintaining proper tire inflation, will also help. Remember, over- or under-inflated tires can cut efficiency significantly.

Continued . . .

New technologies raise production, lower costs

... continued

Consider new technology

If you have older equipment, it may be time to update it. Older equipment tends to be less efficient. New equipment has technology designed to increase productivity while reducing fuel consumption and emissions. Fuel savings and better production will help offset the costs of switching to more efficient machines.

"The new Tier 3 engines have shown significant improvement in fuel economy compared with previous models," pointed out Scott. "At the same time, they're more powerful than before, so the production and efficiency benefits are outstanding."

Komatsu's new ecot3, Tier 3 engines were designed to give the user increased power, while at the same time using less high-priced fuel. Fuel savings can easily be 10 to 15 percent or more. The ecot3 engines are available in a wide variety of new Komatsu equipment, including excavators, wheel loaders, dozers and trucks.

These new machines were specifically designed to maximize fuel efficiency. For example, Komatsu's new Dash-8 series of hydraulic excavators comes with an "eco-gauge," which serves as a guide to efficient operation, giving the operator instant feedback regarding load and how it impacts fuel consumption. It also lets him know if he's idling too long.

New wheel loaders have technology such as an "E Mode" for maximum fuel economy, and come standard with a newly designed variable

Newer technology such as Topcon's GPS+ system, which provides fully automatic grading of your jobsite, can save time and help you be more accurate in material placement. The result is reduced staking and surveying costs, plus you reach final grade in fewer passes which means less fuel to get the job done.

displacement piston pump that combines with Komatsu's Closed-center Load Sensing System (CLSS) to deliver only the necessary amount of flow needed for hydraulic function. It prevents wasted flow, which in turn provides better fuel economy.

GPS systems can boost productivity

You can also use technology to save time and be more accurate in material placement with a global positioning system (GPS) such as Topcon's 3D-GPS+. A GPS system allows users to upload job design into a control box, which then receives machine-positioning signals from the radio antenna, GPS receiver, the blade-mounted GPS antenna, and a cross-slope sensor.

The control box continuously compares actual machine and blade position and calculates corrections that are sent to the hydraulics, creating fully automatic grading of the jobsite. All the operator does is control direction and speed while the GPS creates the final grade. The result is reduced staking and surveying costs. Plus, it takes fewer passes to reach final grade.

"The system has been proven to increase productivity by 30 to 60 percent," reported Randy Noland, Topcon's Machine Control Product Manager. "If you can get to grade faster and place material more accurately you're going to use less fuel. It's really a nice benefit. With a Topcon system, users are going to recoup their initial investment in labor and material savings, but they certainly will save on fuel by getting to grade in less time."

Making changes pays off

It may not be feasible to implement all these changes at once, but making just one could benefit you in both the short term and the long run. They will help you remain competitive and could increase your profitability through increased production and more efficient operation.

"It's hard to predict what will happen to fuel prices in the future, but you can always find ways to reduce your costs," concluded Scott. "Even if you only save a little, it's still more money in your pocket." ■

The MOST USER-FRIENDLY Loader Scale!

- Eliminate overloads
- Manage 20 products
- Last bucket tip off in real-time

The VEI Millennium is specially designed to weigh every bucket with maximum accuracy, every time. The Millennium's ease-of-use has set a new standard for large and small aggregate plants in the United States.

We are looking forward to discussing the loader scale solution for you!

*Also available:
All-in-one helper P5*

• *Ultrafast thermal printer available!*

Millennium

Special features:

- Easy to use
- Weighing in motion
- 0±1% accuracy
- Oversize button
- Large illuminated display
- 3-YEAR factory parts warranty
- National dealer network at www.rmt.ca

**PC600LC-8
& HM300**

100%
compatible
(it's the perfect working relationship)

KOMATSU®

"Synergy" isn't a word often associated with construction equipment, but it's the perfect word to describe the Komatsu PC600LC-8 and HM300-2 working together... especially when the terrain is less than perfect. Both of these hard-working machines deliver:

- Rugged, dependable, go-anywhere productivity
- Tier-3 certified engines to meet emissions standards
- Advanced hydraulics for faster cycle times

If you want maximum efficiency—no matter how rough the terrain might be—put this pair to work. At the end of the day, you'll see the results from machines that are...

100% Komatsu.

NEW PRODUCT

THE SIGMA DOZER

Revolutionary blade design greatly improves performance of Komatsu's new D155AX-6

Large construction-size dozers are becoming more commonplace on jobsites. Whether it's for heavy site-prep grading for residential subdivisions or commercial properties; or for road-building activities; or to strip overburden in a rock quarry — dozers in the 300-horsepower range are in greater demand as contractors put a premium on speed and productivity.

In totally redesigning its 44-ton, 354-horsepower, D155-size dozer, Komatsu has developed a machine that delivers unrivaled productivity in the class. Called the Sigma Dozer (so named because the shape of the Komatsu-patented Sigma Dozer blade is similar to the Greek letter Sigma 'Σ'), the all-new D155AX-6 significantly outperforms its predecessor and the competition.

"It all starts with the revolutionary Sigma Dozer blade," said Komatsu Dozer Senior Product Manager Chuck Murawski. "For years, Komatsu engineers have been working on a dozer blade designed to improve the cutting, piling and carrying of material. The result is the Sigma Dozer, which carries 15 percent more material than the previous Komatsu model and 20 percent more than the leading competitor. Rather than spilling material around the side of the blade, the Sigma Dozer blade's unique design heaps it up in the center and promotes improved rolling."

In addition to the design that allows it to carry more material more easily, the 12.3-cubic-yard Sigma Dozer blade has dual pitch and tilt as standard equipment. Komatsu also went to an all-electronic blade hydraulic control system that is easier on the operator and eliminates horsepower loss associated with proportional pressure control.

Productive and efficient

When you combine the new blade with the new Komatsu ecot3 (Tier 3-certified) engine that boosts output by 10 horsepower, and a new automatic shift transmission with lockup torque converter, the Sigma Dozer dramatically improves both efficiency and productivity.

"With the automatic-shift transmission and lockup torque converter, you're always operating in the most efficient gear," said Murawski. "In conjunction with the blade design, which reduces digging resistance and carries material more smoothly, the automatic

Brief Specs on the Komatsu Sigma Dozer

Model	Operating Weight	Output	Blade Capacity
D155AX-6	87,100 lbs.	354 hp (320 hp w. max cooling fan)	12.3 cu. yd.

Dozer Product Manager Chuck Murawski points to the unique, patented shape of Komatsu's Sigma Dozer blade as key to the D155AX-6's ability to push and carry 15 percent more material while using 10 percent less fuel.

Major improvements to D155AX-6 Sigma Dozer

... continued

shift enables you to doze large quantities of material with less power and therefore use less fuel. In addition to that, we've also installed the blade closer to the tractor, which improves visibility, reduces lateral sway and enhances digging force."

With the 15 percent production increase combined with a 10 percent decrease in fuel consumption, Komatsu reports fuel efficiency — the amount of fuel you'll use to move the same amount of material — is improved by a whopping 25 percent with the D155AX-6 compared with the previous D155 model, and more than that compared with competitive dozers. The unit also has 7.5 percent more

The Sigma Dozer blade is designed to promote rolling of material and to keep it from spilling around the sides.

The D155AX-6 is the first construction-class machine to get the K-Bogie undercarriage, the larger and sturdier undercarriage used on Komatsu mining dozers.

drawbar pull at 2 mph compared to the leading competitor.

Undercarriage upgrade

Beyond the large boosts in productivity and efficiency, the D155AX-6 has numerous other new features and benefits, all of which improve dozing performance and machine reliability. One of the most significantly improved areas is undercarriage, where Komatsu has replaced the X-Bogie system with the K-Bogie system, which is the same undercarriage that's used on mining dozers.

"The D155AX-6 is the first construction-class dozer to use the K-Bogie undercarriage system, which is proven technology on large dozers that run 22 hours a day in a mining environment," said Murawski. "The track frame is roughly 20 percent larger and therefore sturdier and more rugged. It also has seven track rollers instead of six, a wider track gauge and longer track-on-ground length — all of which add up to a smoother and more comfortable ride."

The ripper on the new dozer was also redesigned for better visibility and to allow it to operate at higher pressure (4,000 psi).

Operator safety and comfort

Other improvements include a ROPS structure that's now built into the cab for better visibility; a new, easy-to-use, seven-inch LCD color monitor — the same one used in the new Dash-8 excavator line; and the Komtrax monitoring system that's installed as standard equipment.

Operator comfort is assured with a cab that's wider, higher and much longer than the previous D155. The operator will also appreciate a cab damper-mount system that keeps shock, vibration and noise to a minimum.

Routine maintenance is easily accomplished due to centralized check points and easy access to the engine through gull-wing doors.

"At our Field Days demonstration, operator comments about the machine were very favorable," said Murawski. "All of us at Komatsu are convinced the new D155AX-6 is the clear leader in its class and will pay dividends for equipment users by doing more for less." ■

Precious metals.

Unearthing the world's finest materials calls for the world's finest fleet of mining machines. From trucks to shovels to wheel loaders, Komatsu's complete line of ruggedly reliable mining equipment works in tandem to lower your cost per ton, reduce cycle times and deliver greater payload. Add Komatsu's unmatched service and support solutions and you have equipment worth its weight in gold — and then some.

KOMATSU[®]

BACKHOE LOADERS

100%
productive

KOMATSU®

Komatsu backhoe loaders are designed to deliver. Attention to every detail ensures the highest levels of operator safety, comfort and convenience, productivity, ease of service, durability, reliability, and quality. Komatsu backhoe loaders provide the ultimate comfort and productivity package.

- Low effort Proportional Pressure Control (PPC) loader and backhoe joysticks with SAE/ISO pattern changer.
- Spacious and ergonomically designed operator platform and exceptional visibility.
- Narrow S-shaped backhoe boom and high performance hydraulics.
- Tilting engine hood with easy access to service check and fill points.
- Heavy-duty 1.25 yard loader with parallel lift and over 6½ tons breakout force.

When you want the most from your backhoe loader investment, the choice is 100% clear. Put a Komatsu backhoe loader to work today and enjoy the confidence that comes from machines that are...

100% Komatsu.

MORE NEW PRODUCTS

NEW BACKHOE LOADER

Komatsu's WB146-5 offers greater productivity through innovative design changes

When Komatsu designed its new WB146-5 backhoe loader it included the best its previous model had to offer and added innovations to make it even more productive.

"We believe the backhoe user is going to be very impressed with this new model, which replaces our WB140-2," said Jeff Aubrey, Product Manager Backhoe Loaders. "We redesigned our previous model from the ground up, making significant improvements in the areas that will help the user get more work done in less time."

Changes are noticeable just by looking at the machine, which includes a larger cab with more glass area for 360-degree visibility. A corner exhaust with a front-roof cutout provides an unobstructed view when the loader bucket is at full height. Further cab appointments include an adjustable seat and adjustable steering and backhoe controls, allowing the machine to better fit any operator. Switches and gauges are clustered to simplify operation.

Visibility was further enhanced in the backhoe digging and loading operations with the WB146-5's new S-boom design that gives the operator a better view of the trench and truck. Backhoe buckets are equipped with Extreme Service (XS) adapters and a variety of tooth designs for multiple applications. Reversible outrigger pads accommodate both earth and paved surfaces.

More powerful and stable

A more powerful 88-horsepower engine with 16 percent more torque, combined with Komatsu's HydrauMind™ hydraulic system, provides speed, power and control in both backhoe and front-loading operations. The system is efficient, incorporating two working modes (Economy and

Power) and includes the "speed up" function to increase the working speed of the front loader. The loader also has dual-direction, parallel-lift linkage to keep attachments level throughout a lift. A larger-capacity loader bucket with bolt-on cutting edge is standard.

The engine is housed in a redesigned front end with a heavy-duty, cast nose guard/counterweight, which protects the engine compartment and improves the balance of the machine. The front grille removes easily for cleaning the radiator.

"The new WB146-5 was designed with more production in mind. The speed and power of this machine can make the operator very productive. The operator comforts will result in less fatigue at the end of the work day," Aubrey pointed out. ■

For more information on the WB146-5 backhoe loader, contact your sales representative or your nearest branch location.

Komatsu's new WB146-5 backhoe loader was redesigned from its predecessor, the WB140-2, which it replaced. New features include a larger cab with more glass area for better visibility, a new S-boom design and a more powerful engine with 16 percent more torque for increased productivity.

ARTICULATED TRUCKS UPGRADED

More power and technology in Komatsu's new Dash-2 series of American-built ADTs

Since Komatsu began producing articulated dump trucks in 2001, the units have made a name for themselves as being among the best performing in the industry. Now, with the introduction of the new Dash-2 series, Komatsu has made its ADTs even tougher, more powerful and more technologically advanced.

The HM300-2, HM350-2 and HM400-2 have new ecot3 (Tier 3-compliant) engines with a significant power boost; the Komtrax monitoring system as standard equipment; and a new style that includes a reinforced bumper and transmission guard. On the HM300-2, Komatsu also increased low-end torque by about 10 percent and made improvements to the transmission to handle the extra power so the unit is now about 11 percent more productive.

"These new articulated trucks are a definite upgrade," said Steve Moore, Komatsu Senior Product Manager. "But equally significant to the changes is how far we've come in such a short time. We're now a significant player in articulated trucks. Our units are 100 percent Komatsu with everything designed and manufactured by us and we're one of the only manufacturers who can say that. We're also perhaps the only manufacturer that totally produces its ADTs in the U.S. We've been building our artic at the Komatsu Chattanooga Manufacturing Operation since January 2005, and now most of the units sold in North America come from Tennessee."

More loads hauled

With the new ecot3 engine, the Komatsu ADT line delivers faster acceleration and higher travel speeds, which means more loads hauled per day. To assure shockless shifting and to maximize the life of the powertrain, the transmission is electronically controlled, similar to Komatsu's highly successful rigid-frame dump trucks.

Also similar to the rigid trucks is the ADT line's braking system, which features large-capacity, continuously cooled, wet, multiple-disc brakes that also function as a retarder.

The HM300-2, HM350-2 and HM400-2 have heaped body capacities that are among the highest in their respective classes and have loading heights that are among the lowest. Turning radius is also among the best in the industry, enabling all three units to work on cramped jobsites.

"As far as a smooth ride, comfort and ease of operation, I think any operator who's ever been in a Komatsu ADT will testify that it's first-class," said Moore. "We'll happily demo our units against any competitor at any time because we believe the Komatsu difference will show through early — and that it will prove itself over time." ■

Steve Moore,
Komatsu Senior
Product Manager

PRODUCT SUPPORT

IMPROVE EQUIPMENT UPTIME

Contractor discovers benefits of using KOMTRAX as part of a comprehensive preventive maintenance program

For Brent Hawkins, Owner and President of Marietta, Georgia-based Earthworks Grading & Concrete, Inc., equipment uptime is crucial. The company, which does mass grading and/or roads for large residential subdivisions, is known for doing quality work, and doing it quickly.

In order to get the uptime that delivers the productivity his customers count on, Hawkins uses late-model Komatsu equipment, including two excavators (PC300LC-7 and PC220LC-7), three dozers (D65, D41 and D39), two HM300 articulated dump trucks and a GD555 motor grader. He installed the KOMTRAX equipment monitoring system on each and every machine.

"I don't have a shop or a mechanic. I have my Komatsu dealer do all my maintenance and service work," Hawkins explained. "It saves me money, simplifies my life and keeps me doing what I do best, which is moving dirt."

Hawkins says the initial reason he got KOMTRAX was for convenience — so he wouldn't have to track everything himself, then call and schedule the maintenance every time it was due. "With KOMTRAX, my dealer tracks machine hours and gets machine locations, then just comes out and takes care of the service whenever it's required.

"In addition to the convenience, I've found KOMTRAX to be an easy-to-use system that helps me run my business better," he added. "I check the reports every week or so, just to see where we've been and to plan where we're going. If there's ever any question as to where a machine has been, KOMTRAX answers it by verifying times and dates, and even printing out a map of where the machine has been."

Vandalism and theft deterrent

Hawkins says he's convinced that KOMTRAX is paying off for him.

"One of our pipeline customers ended up spending \$12,000 for a motor on a machine that wasn't a whole lot older than ours. I credit KOMTRAX and our planned maintenance program for keeping our repair bills to a minimum. The guys from the distributorship are specialists, and because of that, I really believe we're being taken care of much better by them than we could take care of ourselves."

As for KOMTRAX itself, Hawkins says he intends to upgrade his system to include geofencing (an out-of-area alert system) and anti-theft features.

"We've experienced some equipment vandalism, and theft is always a possibility. With the KOMTRAX geofence and automatic shutdown (engine lock for nights and weekends), we hope to eliminate or at least minimize those potential problems." ■

For more information on KOMTRAX and how it can benefit your operation, contact your PSSR or the service manager at our nearest branch.

Brent Hawkins of Earthworks Grading & Concrete uses the KOMTRAX equipment monitoring system on all eight of his Komatsu machines. "We're on a planned maintenance program with our Komatsu distributor and KOMTRAX is an integral part of that," said Hawkins. "It also helps me track how and where my equipment is being used."

KOMATSU & YOU

WORKING TO BE THE BEST

Komatsu and our distributors are committed to providing “world-class” product support

Mike Evans,
 VP Product Support, Komatsu America

This is one of a series of articles based on interviews with key people at Komatsu discussing the company's commitment to its customers in the construction and mining industries — and their visions for the future.

After earning a civil engineering degree from the U.S. Military Academy at West Point, Mike Evans spent five years as a military officer in the Army's heavy equipment division, including serving as a tank platoon leader in the first Gulf War. He later served as a Battalion Maintenance Officer in charge of repair and maintenance of 54 tanks.

With that background, he joined the service department of Komatsu America in 1995, eventually becoming Manager of Technical Support for Komatsu Mining Systems. Mike left Komatsu to work at the distributor level of the equipment business, and later joined a motorcoach manufacturer for a time. In late 2003, he returned to Komatsu as Vice President of Parts, and early this year, he was promoted to Vice President of Product Support.

“In this position I oversee activities of the Komatsu parts and service departments and develop strategies on how we can best serve our distributors and their customers,” Mike explained. “We’re developing programs and systems to help us achieve truly excellent, world-class product support. Our goal is zero downtime. Can we ever achieve it? Probably not, but we’ll definitely never achieve it if it’s not our goal.”

Married with five children, Mike likes to spend most of his free time with his family, but he says his other passion is skiing. “I especially love downhill skiing, which I do as often as possible during the season, including taking a week’s vacation out to the mountains each year. For me, it’s the best way to relax and have fun.”

QUESTION: When most of us think of product support, we think of distributors’ parts departments, shops, field trucks, technicians and PSSRs. What is Komatsu’s role in delivering product support to equipment users?

ANSWER: Likening it to my military background, the distributors’ parts and service personnel are on the front line, while we are typically in the rear, supporting their efforts. We’re a resource for them. We have access to machine information from across the country and throughout the world. By collecting that information and passing it on, we’re able to help the distributor do a better job of meeting customers’ parts and service needs.

Of course, we also provide training for distributor personnel. We recently instituted the Komatsu Learning Management System (KLMS) whereby we track the level of technician certification as a way to measure the quality of the service our distributors are providing. We also make field calls with their technicians when needed. And on the parts side, from detailed histories on hundreds and even thousands of machines, we know what parts need to be stocked at the local level. We also let distributors know the optimum number of techs, trucks and PSSRs they should have based on their territory and inventory.

QUESTION: In regard to supplying replacement parts in a timely manner, how is Komatsu’s regional parts depot concept coming along?

ANSWER: It’s no longer just a concept. We already have regional parts depots up and operating in Pittsburgh, Las Vegas and Denver, and we’ll be adding three more — Minneapolis, Portland and Savannah — within the next year.

The advantage of having these parts warehouses located throughout the country is

that it makes it much easier for the distributor to get a part by 7 a.m. the following day — and having worked at the distributor level, I know personally how important that is, compared to getting it in at 11 a.m. or noon.

QUESTION: Most distributors now offer varying levels of a repair and maintenance contract, whereby they will provide the routine maintenance as well as repairs — work traditionally done by the equipment owner himself. What is the advantage of such a program for the equipment user?

ANSWER: A customer benefits two ways. First, he's assured that he's going to get top performance from his machine, often with guaranteed uptime. If maintenance is substandard, the machine isn't going to perform as well or last as long as it otherwise would. By having a distributor's technician do the work, he knows it's going to be done right and that the machine is going to work the way it's supposed to work.

The other benefit is purely financial. When you analyze the full cost of having your own shop and your own mechanics — and their training, tooling and benefits — it's a very expensive proposition that most equipment owners underestimate. They think they're saving money, but when you look closely, it's usually cheaper to have the distributor do it.

QUESTION: What are a few tips you would give to equipment owners wanting to get the longest, most productive, most reliable life out of their machines?

ANSWER: Regular maintenance done properly. Oil analysis every time. Work with your distributor and use genuine OEM parts. It just doesn't make sense to put a \$200,000 piece of equipment at risk in order to save a couple of dollars by buying the cheapest oil and filters you can find. We've tested aftermarket filters that claim to be as good as our OEM product, but they're not comparable at all. They don't stop the contamination nearly as effectively, and with tolerances so tight in today's machines, it doesn't take much particulate getting through to really damage and reduce the life of a component or an entire machine.

Komatsu works closely with its distributors to ensure they have the appropriate number of trucks, technicians and PSSRs to meet the needs of customers. "We also provide training and recently started assessing the skill level of our distributors' technicians," said VP Product Support, Mike Evans.

To improve parts availability to distributors and their customers, Komatsu has opened three regional parts depots, and will open three more in the next year.

QUESTION: Generally speaking, what do you believe Komatsu brings to the table for equipment users?

ANSWER: In my mind, there's no doubt that top-to-bottom, across the entire product line, when it comes to productivity, reliability and technology, Komatsu equipment is the best on the market — and I think most of our customers recognize that. My responsibility is to achieve that same level of performance and recognition for our product support efforts.

As of today, I can assure customers that improving product support is our top priority. My goal is to improve our product support to a "world-class" level so that it's viewed by customers as a positive difference-maker — a reason to buy Komatsu. We no longer want to be just OK, or second-best. We want to lead the way. ■

ON THE LIGHT SIDE

"I want that video that shows those 'real-life' construction jobs; you know, the ones where the sky is always blue and where nothing goes wrong."

"Getting paid online is OK, but I miss seeing those checks from satisfied customers come in the mail."

"I know the safety director said we're supposed to be creative about safety. But I don't think using the pogo stick will really help avoid any hazards while traveling around the jobsite."

"He's a good mechanic. He gets inside the problem every time... and he finds the exit!"

"Your special looks good, but I hope it won't be any big problem to make a few minor modifications to the specs."

"We did so well on the last design-build job, the developer asked us to take on one more part of his next project: the financing... I guess you could call it design, build and pay!"

INDUSTRY NEWS

CONEXPO-CON/AGG tops trade show list

The CONEXPO-CON/AGG international exposition for the construction industries has been named the largest trade show of any industry in the United States, for the third consecutive time. The last three editions of the triennial exhibition have earned the top spot for the years in which it was held — 1999, 2002 and now 2005.

The rankings are compiled by *Tradeshows Week* magazine and are based on net square feet of exhibit space. CONEXPO-CON/AGG 2005 set records for exhibit space and attendance —

spanning more than 1.88 million square feet of space and more than 124,000 attendees.

“Our show is run by and for the industry,” said Show Director Megan Tanel, in explaining CONEXPO-CON/AGG’s continuing success. “For example, all of the planning committees are made up of exhibitors and attendees and we listen to their input.”

The next CONEXPO-CON/AGG is scheduled for March 11-15, 2008, at the Las Vegas Convention Center. ■

DISTRIBUTOR CERTIFIED

BEFORE AND AFTER

How a Komatsu Distributor Certified used machine differs from other used machines

Lee Haak, Komatsu
 ReMarketing
 Director

What's the difference between a Komatsu Distributor Certified used machine and any other used machine? The main difference is, with a Komatsu Distributor Certified machine, you're assured of what you're buying.

"When a Komatsu distributor inspects and grades a machine, there are specific criteria it must meet to receive the grade it gets," said Komatsu ReMarketing Director Lee Haak. "Often, improvements are made to bring the machine up to a higher level."

Because of the inspection and improvements, the Komatsu distributor

is confident the machine will perform as represented, and therefore typically is willing to stand behind the sale by offering an extended warranty.

"With a Komatsu Distributor Certified used machine, the buyer is basically assured that the unit will do what it's supposed to do — and if it doesn't, the distributor will make it right," said Haak. "That and frequent special financing rates are what differentiates a Distributor Certified machine from a used piece that's bought at auction or from a broker."

More than just a paint job

As part of the inspection process for a Distributor Certified used machine, trained technicians will not only note the easy-to-see cosmetic damage, but will also uncover mechanical problems and potential undercarriage issues. All aspects of the machine will be repaired or replaced, or the shortcomings will be pointed out to you as a potential buyer.

"A machine that's Komatsu Distributor Certified has almost certainly had much more than just a paint job — unless that's all it needed," said Haak. "The great thing about Komatsu machines is that the original equipment is built to such a high quality standard, it's worth repairing. That's why we're able to put Distributor Certified machines back in the marketplace for a second life, and do so with confidence that they'll perform productively and reliably."

For more information on how a used machine earns Komatsu Distributor Certified status, you can go to the Komatsu America Web site, click on "used equipment," then click on "What is ReMarketing?" to view a multimedia presentation. ■

These photos show the stark "before and after" difference Komatsu Distributor Certification makes. Half of this very used D61 was left "as-is" (above) while the other half was certified (below).

"A good-looking Komatsu Distributor Certified machine is not just a used machine with a new paint job," said Komatsu ReMarketing Director Lee Haak. "If it's certified highly enough, it was either in very good condition to begin with or was externally and internally repaired to meet specific standards to ensure good, reliable performance."

KOMATSU DISTRIBUTOR CERTIFIED USED EQUIPMENT

The next best thing to new.

If it can be measured, we measure it!

Whether you're looking for a high-quality machine that will become part of your fleet, or for a machine that will get you through the busy season, Komatsu Distributor Certified Used Equipment is your best alternative to buying new.

If it can be measured, we measure it! Specially trained Komatsu Distributor Certified evaluators check, measure and diagnose virtually every aspect of the machine. Once the machine meets Komatsu's high performance standards, your local distributor can tailor the machine for your site-specific needs. And to add to your peace of mind, most Komatsu Distributor Certified Used Equipment is eligible for special financing and warranty.

Purchasing Komatsu Distributor Certified Used Equipment makes sound business sense. You'll receive good value for your money and a reliable and productive machine that will get the job done for years to come — we guarantee it!

To learn more about Komatsu ReMarketing's Distributor Certified Used Equipment, contact your local Komatsu Distributor or go to our Web site at www.equipmentcentral.com and click on "used equipment."
